WHITEPAPER

Endangered Birds: Their Future Foretells Your Future

First, it begins with three comprehensive solutions that serve as a foundation for all the other solutions. Then there's an introduction that answers questions most people will have. After that, each part begins with a brief description of what's happening followed by specific solutions. And yes, what's happening to our environment can be disturbing, even depressing. However, each of the solutions represents an opportunity to create good news, help the economy, and create a better life for everyone. On a personal note, most of the proposed specific (personal) changes are easy. And many of them can save you money plus improve your health.

White-headed Woodpecker, Male, on the American Bird Conservancy "Watch List" of Birds at Risk

We need a new economic strategy

Currently, our economy is based on maximizing profit. And thus, it has become a system of expanding capitalism. While profit and capitalism can be good, unregulated expansion can be disastrous. Under this strategy, corporations exploit and pollute everything in their quest for expanding profits. And in doing so, corporations behave like machines. But machines have no morals. No compassion. No humanity. This is not sustainable. Eventually, this system will destroy civilization by poisoning our environment and/or running out of resources. So, we need an economic strategy based on preserving life. In financial terms, this is a strategy based on preserving principle – even increasing it through investments. And in this case, that principle is the environment we depend upon for our existence. Such a strategy has merit in that it is sustainable. And it provides a fair income for everyone (instead of a huge income for a few). Corporations would then use resources within the limits of their availability. They would include the cost of resource replacement, environmental restoration, and waste disposal in their products. And they would offer fair compensation to everyone effected by every part of their operation. In addition, human impact would be the main consideration in the design and production of every product. And so, no corporation would produce a product that made people sick, destroyed life, or threatened the future of civilization.

What Are Extinct Birds

These birds were once endangered and have disappeared because of human activity that: a) Changed/Eliminated their environment, or b) Killed them.

According to the World watch Institute, 103 bird species have become extinct during the past 200 years. And according to Wikipedia, over 190 bird species have become extinct since 1500.

What Are Endangered Birds

These birds are at risk of disappearing. If their populations continue to decline, they will become extinct. There are now 1,469 bird species threatened with extinction, and 40% of the world's birds have declining populations.

The first question everybody asks is: Why bother?

1) Birds react first.

Birds serve as indicators of environmental health.

Since they are more sensitive to environmental changes than people, they foretell our future.

And – this is important – our future depends upon the health of our environment.

Imagine, for example, that you are on an airplane.

I expect you would care about the physical condition of that plane.

And I'm sure you would complain if someone started damaging the plane.

2) Birds perform essential functions.

Birds help manage insects and vermin. For example, they eat 400 to 500 metric tons of bugs globally every year.

They also pollinate flowers. And they spread seeds.

Thus, they are an essential part of nature's ecosystem.

Global warming threatens birds (and everyone else)

These threats include reduced food, water, and habitat.

If you want to read more about these threats, Ivogel put that information at the bottom of this article.

These threats include reduced food, water, and habitat.

If you want to read more about these threats, Ivogel put that information at the bottom of this article.

Solutions: Here are seven easy actions everyone can take:

- 1) Vote for politicians who support protecting the environment.
- 2) Call or write your elected officials to ask them to support legislation that protects the environment.
- 3) Support organizations that work to protect the environment. (Suggestions below)
- 4) Buy from companies that use environmentally friendly processes.
- 5) Invest in companies that use socially responsible practices.
- 6) Divest from companies whose policies and practices damage the environment.
- 7) Conserve energy.

The digital world is becoming a sure thing in everyone's life year after year, everyone knows this, big financial institutions are making their way in the crypto space dragging everyone's attention. There are thousands of choices, but there are only a few winners. You would not want to put all your life savings in a token that has nothing behind it, you would risk waking up next day and realize that all your money were gone. However, there are many attractive tokens that have great teams behind them and are making sure there is growth and continuity for their projects. You would really want to invest in this kind of projects that can guarantee each investor there are benefits attached to their investments, and even more you would make sure to invest early so will enjoy more benefits along the way. The benefits are closely linked to the utility of such tokens.

Abstract

Nowadays, the Crypto Currency world is being driven by memes, shit-coins and non-functional tokens, created on several different networks and blockchains, which serve no purpose at all other than tricking users into trading those assets to create market fluctuations that are backed by no specific reason at all and are all artificially made. This mess must come to an end, and Ivogel is here to do that.

TOKEN DETAILS

Name: Ivogel

Symbol: IVG

Supply: 1000000000

Burn: 50%

Team: 10%

In Circulation: 10%

Pre-Sale: 15%

Exchanges: 5%

Marketing: 5%

Airdrop: 5%

Pre-Sale

Supply: 100000000

Pre-Sale: 150000000

Starting: 2021 - 07 - 27

Ending: 2021 - 08 - 05

Time: 10 days

Accepted Currencies: BNB

Exchange rate of tokens 1 BNB 500000

Max amount collected : 300 BNB

Burning

In the world of cryptocurrency, "burning" a token means to purposefully take that token out of circulation, often by sending it to a cryptocurrency wallet to which no-one has access.

Burning large amounts of cryptocurrency tokens can have the effect of increasing the scarcity of that token

The practice of Coin Burning is common in the crypto industry and is quite simple to implement. Many projects use coin burning to preserve their assets supply and demand ratio. Reducing the total volume of coins, theoretically, leads to their value increase, provided that current demand indicators are maintained

Token burning is usually performed by the development team behind a particular cryptocurrency asset. It can be done in several ways, most commonly by sending the coins to a so-called "eater address": its current balance is publicly visible on the blockchain, but access to its contents is unavailable to anyone

The IVG token burn is 50% and will be done in three steps:

Step 1: 30%

Step 2: 10%

Step 3: 10%

ROADMAP

PHASE 1

- DEFI TOKEN LAUNCH
- WEBSITE LAUNCH
- 10000 TELEGRAM MEMBER
- START PRE-SALE (IDO)
- BURN 30%
- END PRE-SALE (IDO)

PHASE 2

- TOKEN LISTING ON EXCHANGES
- MARKETING
- BURN 10%
- 50000 TELEGRAM MEMBERS
- 50000 HOLDERS

PHASE3

- LISTING ON COIN GECKO**
- LISTING ON COIN MARKET CAP**
- BURN 10%**
- TOKEN LISTING ON BIG EXCHANGES**
- 100000 TELEGRAM MEMBERS**
- 100000 HOLDERS**

PHASE 4

- DONATION TO CHARITY OF COMMUNITY**
- AIRDROP**
- UPDATE WHITE PAPER**
- IVG MOBILE APP LAUNCH**

PHASE 5

- IVG SWAP**
- TOKEN LISTING ON ANOTHER EXCHANGES**
- 200000 TELEGRAM MEMBERS**
- 200000 HOLDERS**

PHASE 6

- DONATE TO HELP BUILD**
- 500000 TELEGRAM MEMBERS**
- 500000 HOLDERS**
- COMMUNITY WILL DESIDE WHAT HAPPENS**

DISCLAIMERS
